EXPERIENCE

Software Engineer - Alignerr · AI Data Quality Platform (agentic AI development) · Remote Aug 2025 - Present

- Partnered with AI research teams to define labeling guidelines and quality standards for LLM training data
- Reviewed AI-generated code samples across Python, JavaScript, and TypeScript against engineering-grade benchmarks, flagging logical errors, edge-case failures, and performance regressions for model improvement
- Built Python automation pipelines ingesting data from multiple sources, applying business-rule transformations, validating output, and pushing to downstream systems
- Built a tree-sitter based AST analyzer to extract structural patterns from code samples, feeding metrics into the quality scoring pipeline
- Used agentic AI workflows, prompt engineering, and LLM tooling to prototype automation; the AI suggested error handling, retry logic, and monitoring improvements not initially considered

Software Engineer - Cisco Systems · Webex Collaboration Platform · Bangalore, India Aug 2024 - Aug 2025

- Dealt directly with enterprise customers to understand requirements and translate them into delivered features on a B2B SaaS platform consumed by enterprise customers
- Developed React-based UI components for Instant Connect Client, integrating with backend REST APIs to deliver real-time collaboration features
- Designed and implemented REST APIs and microservices using Node.js, TypeScript, Express, PostgreSQL, MongoDB, and SQL Server following SOLID principles for maintainability at scale
- Built and deployed cross-service integrations on AWS EC2 with DynamoDB for the Webex Slack Bot, handling real-time message routing between Webex and Slack at scale
- Optimized API response times through Node.js request lifecycle profiling, N+1 query elimination, index addition, and redundant serialization removal
- Diagnosed and resolved cross-service production incidents by tracing execution logs across microservice boundaries to identify root cause
- Set up CI/CD pipelines with Jenkins and GitHub Actions, reducing deployment cycle time and catching integration issues before production

TECHNICAL SKILLS

AI & Automation: Prompt Engineering, LLM Orchestration, RAG Architectures, AI Agent Workflows, tree-sitter AST Analysis

Languages: TypeScript, JavaScript, Python, SQL, C, Rust

Frontend: React, TypeScript, HTML/CSS, Vite, HTMX

Backend: Node.js, Express, REST APIs, WebSockets, Microservices, JWT/OAuth

Cloud & DevOps: AWS (EC2, DynamoDB), Docker, Git, GitHub Actions, Jenkins, CI/CD Pipelines, Linux

Security: Secure API Design, Input Validation, Vulnerability Review, Web Security, Encryption Standards, Root Cause Analysis

Databases: PostgreSQL (query optimization, indexing), MongoDB, DynamoDB, SQL Server, MySQL

PROJECTS

Corpus · Content-Addressed Knowledge Store for AI Agents (TypeScript, Deno)

- Built a content-addressed knowledge store where AI agents publish signed Problem, Recipe, Guide, and Verification nodes through a JSON:API server
- Implemented a JSON:API server with search, filtering, sorting, pagination, and compound documents on Deno 2.x
- Added version chains with supersession lineage, fork detection, and confidence scoring from independent verification receipts

AVCS · Autonomous Version Control Assistant (Rust)

- Classifies git changes with a deterministic rule engine using tree-sitter AST parsing and evidence detection
- Models commits and diffs as graph-based structures to reason about code behavior and change impact; targets editor integration via the LSP protocol

Constellation · Full-Stack Task Board (Next.js 16, TypeScript)

- Built a full-stack task board with Next.js 16, React 19, Prisma/SQLite, shadcn/ui, and NextAuth

manuscript-transcriber · AI Document Transcription (TypeScript, Python)

- Built a web app using a Hugging Face TrOCR AI model to transcribe digitized manuscripts with confidence scores; FastAPI backend with W3C Web Annotation JSON export
- Implemented confidence-based flagging that surfaces low-quality transcriptions for manual review, improving downstream accuracy

acer-ec · Acer EC Communication Framework (C)

- Developed Linux kernel modules for Acer EC communication, enabling fan control and thermal management on Acer Aspire A715-79G
- Reverse-engineered the Embedded Controller protocol to read sensor data and write fan curve configurations from userspace

EDUCATION

Bachelor of Science · Computer Science Aug 2019 - May 2023

Kannur University, Kerala

- Coursework: Data Structures & Algorithms, Operating Systems, Computer Networks, Database Management Systems, Software Engineering, Compiler Design
